

# Jim Roth talks about Pres. Trump's Energy Executive Order on Oklahoma News Report

On Friday, Phillips Murrah Director and Chair of the Firm's Clean Energy Practice Group, [Jim Roth](#), appeared on the television show [Oklahoma News Report](#) on OETA.

Roth spoke with reporter Bob Sands about President Trump's energy-related executive order that initiates a review of former President Obama's Clean Power Plan, which restricts greenhouse gas emissions at coal-fired power plants.

According to the ONR report, Oklahoma public utilities are moving forward on new renewable energy projects despite the President Trump's order.

"Market dynamics are going to dictate the outcome, not political will," Roth said on the news program. "We're at a point, thankfully, in American ingenuity that renewable technologies have improved to point to where they are often the cheapest form of energy."

From Oklahoma News Report:

*The president's executive order to the EPA to rewrite the Clean Power Plan doesn't mean much according to Oklahoma utilities and energy experts. OG&E says it is on target already to meet the plans requirements and is now planning a new solar facility. Energy experts say renewables have already replaced coal in the amount of electricity being generated in Oklahoma. This story aired on the ONR on OETA-The Oklahoma Network.
